FOR IMMEDIATE RELEASE

INTER-EST ANNOUNCES INTER-EST VISION

Inter-est UK Ltd. has announced the launch of Vision: a new estimating solution.

In an industry first, Vision will offer the complete integration of Thatcham data including graphics with Thatcham service condition, TTS times and processes and escribe methods.

Michael Nixon of Inter-est said: "Vision offers users the ability to create assessments with all of Thatcham's research at their disposal. We call the new approach to assessing MBE – Methods Based Estimating and we believe it will greatly assist our users, especially those working to achieve ATA and PAS 125 accreditation".

All Inter-est users can access phase one of Vision by clicking on the graphics button which is found on the parts tab of Inter-est. Phase 2 will launch in September and will see all the existing Inter-est functionality integrated into Vision's new user-interface.

A quick start guide to Vision is available at the Inter-est web site. However to get the most from Vision Inter-est recommends users attend the half-day "Vision and Thatcham 1.4.1 refresher" course. Courses will run from the new Inter-est training suite in Macclesfield during July and August. The course will cost £125.00 per delegate and further details are available at www.inter-est.net.
