Press Release

For Immediate Release

28 May 2015

Three New Photo Solutions Released by Inter-est. Smartphone Apps Driver-cam and Repair-cam Save Time and Money. Inter-view Supports Cost-Effective Image Management for Estimates on All Major UK Platforms.

Inter-est, the Claims Accelerators have released new software solutions making it easier and faster to take, attach, transmit and manage images of damaged vehicles. The solutions include two apps for Smartphones (both available for Android or Apple):

- **Driver-cam**: no more waiting for drivers to make an appointment at a bodyshop.

- **Repair-cam**: taking solutions out of the bodyshop - to wherever they're needed most.

Both **Driver-cam** and **Repair-cam** are available as apps, free to download on Android or Apple. The charge for usage is £1.50 to use either or both on a job.

Inter-est have also launched **Inter-view** which makes it easy to include images from Driver-cam or other Inter-est sources into estimates processed on all major systems used in the UK.

Inter-view is available now, and free-to-use.

Jeff Manricks, UK Head of Sales and Business Development at Inter-est explained: "With **Driver-cam**, everything is simple: the owner just inputs information, and captures photos of the damage, via a Smartphone. Once the data is transmitted, the vehicle is already on its way to the next stage: analysing costs. No need for repairers to visit just to grab images! **Repair-cam** gives bodyshops the flexibility - and economies - of working wherever suits them (or the owner) most. Now they have the choice of capturing images efficiently. And **Inter-view** brings greater freedom than ever before. **Inter-view** can be used with any estimating or bodyshop management system."

Driver-cam, **Repair-cam** and **Inter-view** were all developed in-house by Inter-est, the Claims Accelerators.

Founded in 2003, Inter-est UK Ltd pioneered the delivery of estimating solutions in the auto/repair/insurance sectors over the Internet. Inter-est offers market-leading computerised assessment, management and communication solutions that ensure effective, audit-able, end-to-end claims processing.

The Inter-est estimating system, Vision, enables rapid, accurate estimating using the latest Thatcham data.

Examples of recent work include FNOL, triage systems to reduce or eliminate the number of estimates required and identify write-offs quickly, mobile apps to take solutions on the road, management information dashboards that provide visibility and control, and tablet-based systems for sharing data, images and work-in-progress.

As well as repair and insurance, active sectors include vehicle rental, leasing and fleet management.
